Egyptian Mathematics

Most of our knowledge of Egyptian mathematics comes from two papyri – Ahmes and Moscow. Try to find about them as much as you can. Here are some questions to help you organise your research findings:

- Why are these two papyri called ‘Ahmes’ and ‘Moscow’?

- When were they written?

- Who wrote them?

- Why are they important?

- What kind of maths can you learn from them?

- Where are these two papyri now?

Now you can either make a poster containing answers to these questions, or a Power Point Presentation.
